

LEDOUX PRÊT

N. Shook

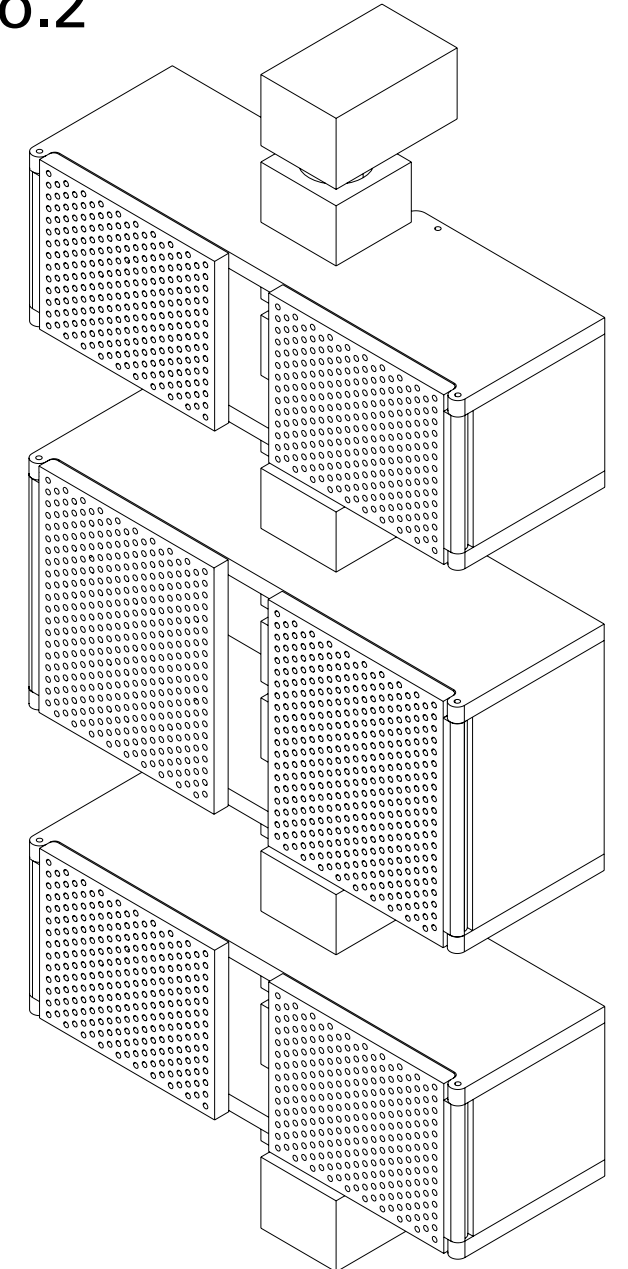

No.1

Number one features a solid wood central column with a softened, rounded profile. Perforated wooden shelves are draped in 1/4" aluminum, which contours the surfaces and slot seamlessly into the column body for a perfect fit and easy reconfigurability.

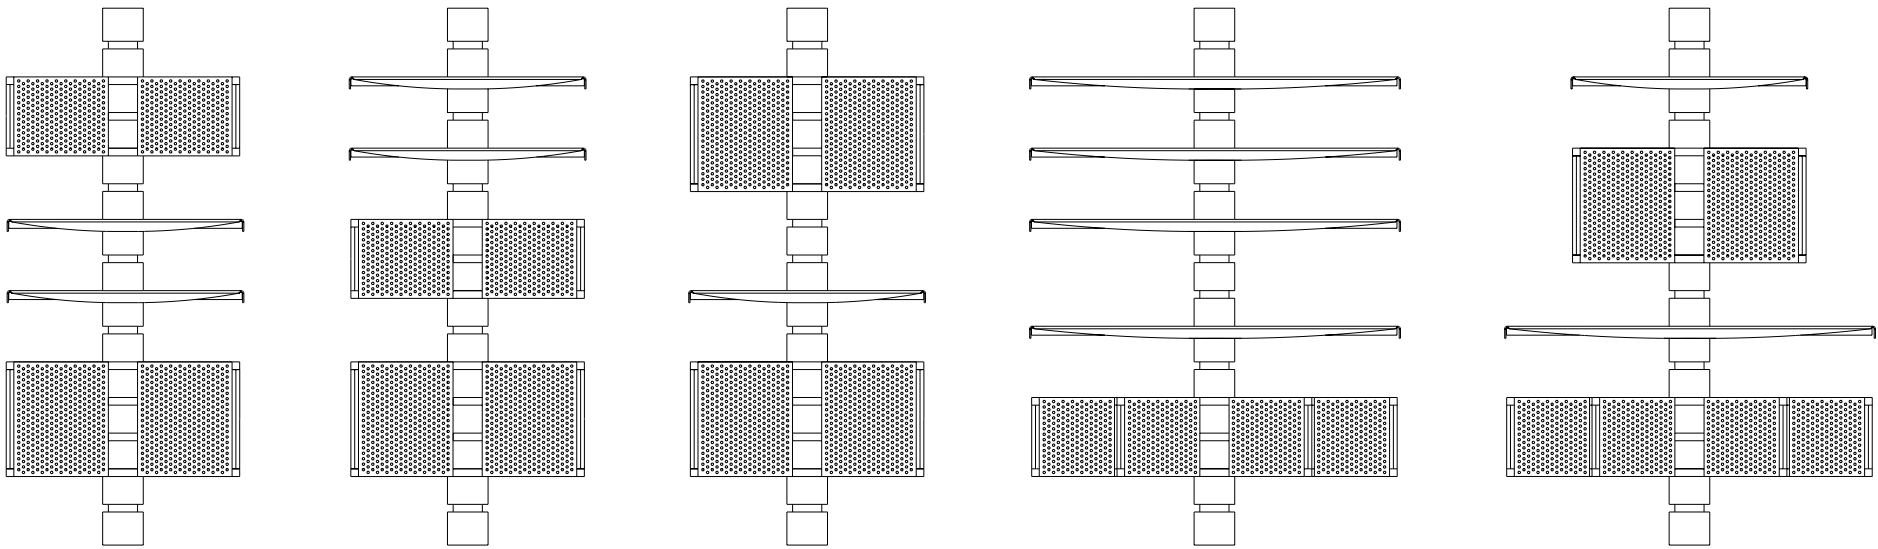

No.2

Number two retains the profile of the original column inspired by Neoclassical architect Claude Nicolas Ledoux. Solid wood cabinets slide onto the central column, featuring perforated doors and integrated wooden hinges. Constructed entirely without hardware, the piece relies on exposed joinery and handcrafted precision.

INTERCHANGEABLE CONFIGURATIONS

Ledoux Prêt currently features two distinct designs with fully interchangeable components. Each element is crafted from solid wood or aluminum, using no hardware to join parts or materials. Cabinets and shelves locking into place with removable tenons, allowing for seamless assembly and reconfiguration. Built to last for generations, these highly functional, sculptural works can be tailored to their environments and evolve over time.

MATERIAL

The Ledoux collection is crafted in noble materials and can be customized in a range of solid woods and finishes. Our studio prioritizes the use of sustainably forested wood and makes an effort to use North American hardwoods as often as possible.

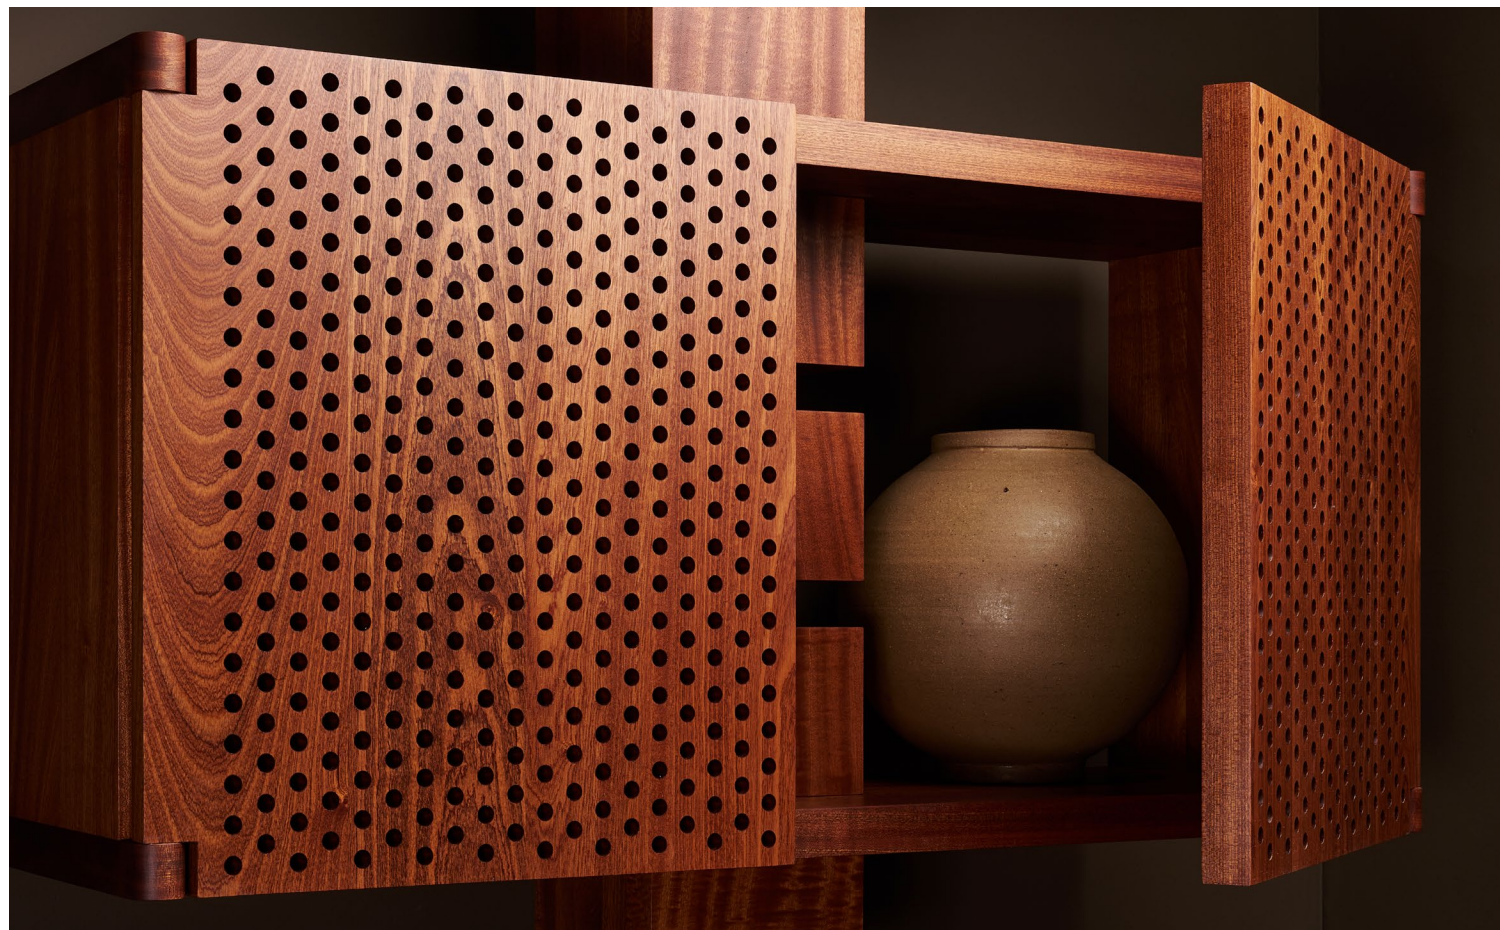

SPECIAL NOTES & CUSTOMIZATION

Ledoux Shelving can be built to any height with a custom combination of shelves and cabinets to suit. Each piece is made to order in our Brooklyn fabrication studio. The standard design anchors to the wall, but we also offer ceiling-mounted or fully freestanding configurations upon request.

Please contact the studio for assistance with 3D models to support the customization process.
